

ADH Low Voltage Motor Controller

12 Way

The AHD-LV Advanced Digital Hoist Controller was designed to control up to 24 electrically compatible motors, either separately or simultaneously.

Thanks to the AHD-link function, you can connect up to 16 AHD-line products, which allows you to control multiple devices from one spot.

The device is equipped with a unique APA (Automatic Phase Align) module, which guarantees that the motors are moving in the same direction on any alignment of input phases

Another feature of AHD-LV is the AVM (Automatic Voltage Metering) module, which checks the main voltage for AC 400V +-20%, star configuration and protects the hoists in case of a problem with the main voltage
